SMART VOTING SYSTEM

ABSTRACT

The project "smart voting system" aims at making the voting process easy in cooperative societies. Presently voting is performed using ballot paper and the counting is done manually, hence it consumes a lot of time. There can be possibility of invalid votes. All these make election a tedious task. In our proposed system voting and counting is done with the help of computer. It saves time, avoid error in counting and there will be no invalid votes. It makes the election process easy.

Existing System

Existing system is a manual one in which users and the details of the candidates are stored in books .The users have to wait a long time in queues for voting .Wrong and unwanted votes are given .counting of votes are done manually which takes lots of time and inaccurate counting is done. It is very difficult to maintain historical data.

DISADVANTAGES:

The following are the disadvantages of the existing system

- It is difficult to maintain important information in books.
- More manual hours are needed for counting of votes.
- It is tedious to manage historical data which needs much space to keep all the information regarding the voters and the candidates.
- Voters has to wait in a long queues for voting they have to travel long distances.

PROPOSED SYSTEM

The smart voting system is a software application which avoids more manual hours that need to spend in record keeping and calculating votes. Through this the users and the candidates are registered online .their information is stored in the database the admin can easily access the details of the voters and the candidates The voters are allowed to vote online they can even vote by sitting at home .Every User s allowed to vote only once so there is no chance of duplicated votes. This application keeps the data in a centralized way which is available to all the users simultaneously. It is very easy to manage historical data in database. They can easily use the tool that decreases manual hours spending for normal things and hence increases the performance.

SYSTEM SPECIFICATION

Hardware Requirements:

- System : Pentium IV 2.4 GHz.
- Hard Disk : 40 GB.
- Floppy Drive : 1.44 Mb.
- Monitor : 15 VGA Colour.
- Mouse : Sony.
- Ram : 512 Mb.

Software Requirements:

- Operating system : Windows 7.
- Coding Language : ASP.Net with C#
- Data Base : SQL Server 2005.
